

Group 2 “Conservators”

Conservation as a bridge between practice and theory:

1. Integrate and share goals
 - Educate, communicate, and respect all across all fields and share goals.
2. Have to integrate preservation into everything you do from the start to value information
 - Infuse throughout culture
 - Ingrain within genetic code
3. Educate fully for full resources
 - preservation (all formats)
4. Educate current students so preservation becomes the central theme
 - Because if you don't have it, you won't be able to keep it
