

10 Semester Nursing Program

Requirements

In order to officially participate in the 10 semester nursing program, you will need to successfully progress through your first two years at Simmons. This means you are required to have earned a C+ or better in each of your prerequisite courses with no more than one retake, and demonstrate satisfactory progress in these two years. As long as these requirements are met, your sequence will begin in your junior year and include summer coursework on campus (at the end of your junior and senior years).

Financial Information

It is important to note that there will be additional tuition and housing costs beyond the four-year tuition, due to the two extra summer semesters. You will not receive an increase in scholarship and financial aid to cover the extra semesters, however, you may request to prorate your scholarship to spread some of the award over your summer semesters. Students will need to work closely with their financial aid counselor before their junior and senior year to ensure they create a plan that best supports the two summers of study. Students in the 10 semester nursing program pay the nursing student tuition rate each semester they are enrolled.

The tuition for two additional semesters is a significant cost to consider when deciding if you will enroll in the 10 semester nursing program.

Prerequisite Courses

- General Biology with lab
- Principles of Microbiology with lab
- Anatomy and Physiology I with lab
- Anatomy and Physiology II with lab
- Introduction to Chemistry: Inorganic with lab*
- Introduction to Chemistry: Organic with lab*
- Introduction to Psychological Science
- Developmental Psychology or Life Span Development

**These two course requirements can also be met by taking CHEM 110 General, Organic, and Biological Chemistry with a lab.*

Course Information

Please see the reverse side of this document for details of the 10 semester nursing curriculum sequence.
